

ABOUT HOOK SPLINT.

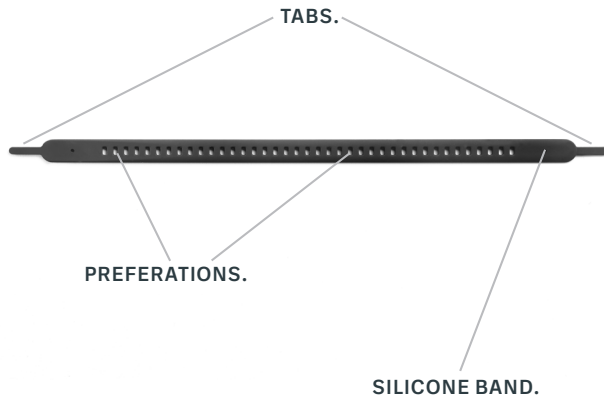

HOOK SPLINT is a metallic band with a smooth silicone finish, and a locking tab on each end. It utilizes a novel approach to custom splinting by transforming a ready to use, flexible band into a rigid orthosis.

To lock the orthosis, the ends are overlapped and metallic tabs are secured through perforations.

The segment of overlap is called the *Rigid Zone*, utilized to provide extra support to the area that it is applied to.

HOOK SPLINT consists of the following components:

PLEASE REVIEW PRECAUTIONS AND CONTRAINDICATIONS IN PATIENT GUIDE.
